

# Heart of Iowa Regional Transit Agency (HIRTA) Health Connector for the Most Vulnerable: An Inclusive Mobility Experience from Beginning to End

## ITS4US Deployment Program – Phase 2

Photo source: U.S. DOT

### ITS4US DEPLOYMENT PROGRAM OVERVIEW

ITS4US Deployment Program is a \$40 million multimodal effort, led by the Intelligent Transportation Systems (ITS) Joint Program Office (JPO) and supported by the Office of the Secretary, the Federal Highway Administration, and the Federal Transit Administration, to identify ways to provide more efficient, affordable, and accessible transportation options for underserved communities that often face greater challenges in accessing essential services.

The program aims to solve mobility challenges for all travelers with a specific focus on underserved communities, including people with disabilities, older adults, low-income individuals, rural residents, veterans, and travelers with limited English proficiency.

This program enables communities to build local partnerships and develop and deploy integrated and replicable mobility solutions to achieve complete trips for all travelers.

The U.S. Department of Transportation (U.S. DOT) launched Phase 1 of the program in January 2021 and, across 18 months, supported the concept development efforts of select sites. In June 2022, four projects were selected for Phases 2 and 3 deployment, which includes the design, testing, operation, and evaluation of their deployments.

#### Vision

Innovative and integrated complete trip deployments support seamless travel for all users across all modes, regardless of location, income, or disability.

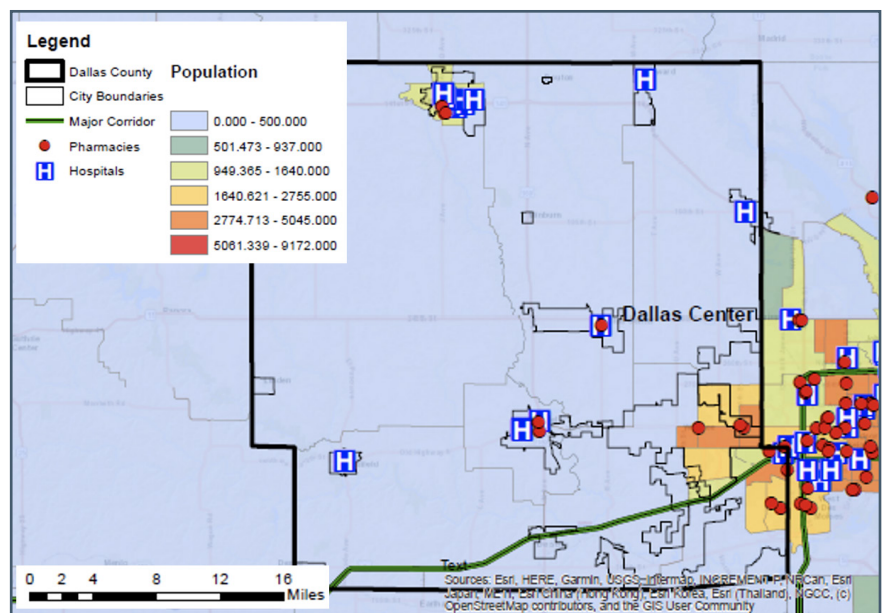

#### Goals

- Spur high-impact integrated complete trip deployments nationwide
- Identify needs and challenges by population
- Develop and deploy mobility solutions that meet user needs
- Measure impact of integrated deployments
- Identify replicable solutions and disseminate lessons learned

### SITE DEPLOYMENT SUMMARY

The Health Connector solution intends to demonstrate an innovative concept that will address various bottlenecks associated with healthcare transportation access for HIRTA communities, focusing on mostly rural Dallas County, Iowa. Some of these challenges are the key reasons behind missed appointments or unacceptable levels of preventive or as-needed healthcare in the HIRTA service area. For this deployment, the HIRTA team plans to implement a scalable and replicable solution enabling inclusive access to non-emergency medical transportation for all underserved populations and their caregivers by resolving access barriers through advanced technologies. This solution will allow Dallas County residents without access to transportation who need to travel to/from a medical appointment to explore their transportation alternatives, and book both medical and transportation appointments at the same time. Further, this solution will include information and wayfinding services to guide them at every step of their trip.

*"This project aims to enhance convenience, availability, and reliability of healthcare transportation, improving healthcare access for the one-third of Dallas County residents who fall in at least one underserved group."*

### APPROACH – PROJECT CHALLENGES AND SOLUTIONS

The Health Connector is an innovative solution that will utilize advanced transportation technologies to improve healthcare access for Dallas County residents. This solution is envisioned to address the following key issues:

- **Lack of Awareness About Available Transportation Options:** Travelers have limited information on options beyond personal (or arranged via family or friends) transportation for medical trips. The Health Connector will provide a platform that will allow customers to explore the availability of HIRTA and its partner vehicles through a “trip planning and discovery” feature.
- **Lack of Integrated Booking and Trip Management Experience:** The planned Health Connector deployment concept seeks to address a longstanding need to integrate transportation and healthcare. By integrating appointment scheduling, management, and day-of service monitoring functions, an ultimate “one stop” experience can be provided for all travelers for their mobility needs, with specific focus on underserved populations. This solution will help Dallas County residents who are not able to make their medical appointments due to lack of access to transportation. They will be able to explore their options and book and manage a ride at the schedule of their choice.
- **Limited Capabilities with Current Transportation Modes:** Apart from HIRTA vehicles, there are limited modes that can meet the needs of underserved groups. HIRTA intends to partner with local third-party providers (e.g., taxi companies) for added capacity to address the travel needs of Dallas County residents, as required.
- **Limited Wayfinding Capabilities:** Another missing link in medical transportation has been wayfinding both for locating the vehicle on arrival or wayfinding/navigating to the correct destination inside a facility upon arrival. The Health Connector solution will provide a seamless wayfinding experience for travelers.

### MEASURING DEPLOYMENT IMPACT

Some of the key performance goals and targets for the Health Connector include:

- **Reducing medical appointment deferment due to lack of transportation:** The convenient access to transportation services provided by HIRTA, through the Health Connector, will help Dallas County residents make their medical appointments. One target for this performance goal is at least a 30-percent reduction in the number of missed medical appointments that are related to transportation access during the 18-month evaluation period. Another target is at least 80 percent of residents responding by indicating that transportation did not present a barrier to healthcare access 6 months after the Health Connector launch, and at least 90 percent of residents responding by indicating that transportation did not present a barrier to healthcare access 12 months after the Health Connector launch.
- **Reducing trips unfulfilled due to system unreliability:** The Health Connector will help reduce the number of unfulfilled healthcare trip requests by improving system reliability through improved transportation management capabilities. Targets include at least a 30-percent reduction in the number of trips where HIRTA was unable to fulfill the traveler’s request after the Health Connector is in use, and at least a 20-percent reduction in the number of missed trip events by traveler after the Health Connector deployment.
- **Improving travel-time prediction accuracy:** The Health Connector will assist in calculating onboard (in-vehicle) travel time for a trip accurately and reliably at the time of scheduling. Travel time accuracy in this context refers to the number of minutes and seconds spent onboard, boarding, and alighting. The target for this goal is travel-time accuracy within 10 minutes of scheduled times 90 percent of the time, not counting delays due to external factors.
- **Improving coordination among HIRTA, healthcare providers:** The Health Connector will automate tasks to minimize the number of person-minutes spent in coordinating a trip by HIRTA and partners. Healthcare partners will have access to the same trip booking and dispatching software as HIRTA dispatchers and will be able to register customers and book or modify trips, as authorized. It is expected that the Health Connector will help achieve a target of 5 minutes or less in coordination time for customers calling in to book their transportation appointment for healthcare needs.

### PROJECT PARTNERS

- HIRTA
- IBI Group
- Community Transportation Association of America
- Dallas County Health Department
- Iowa State University (ISU)
- Capture Management Solutions
- Navilens
- Mobility on Demand Vendor

## PHASE 2 | ITS4US DEPLOYMENT PROGRAM

ITS4US Deployment Program is a \$40 million multimodal effort, led by the Intelligent Transportation Systems Joint Program Office (ITS JPO) and supported by the Office of the Secretary, the Federal Highway Administration, and the Federal Transit Administration, to identify ways to provide more efficient, affordable, and accessible transportation options for underserved communities that often face greater challenges in accessing essential services.

The program aims to solve mobility challenges for all travelers with a specific focus on underserved communities, including people with disabilities, older adults, low-income individuals, rural residents, veterans, and limited English proficiency travelers.

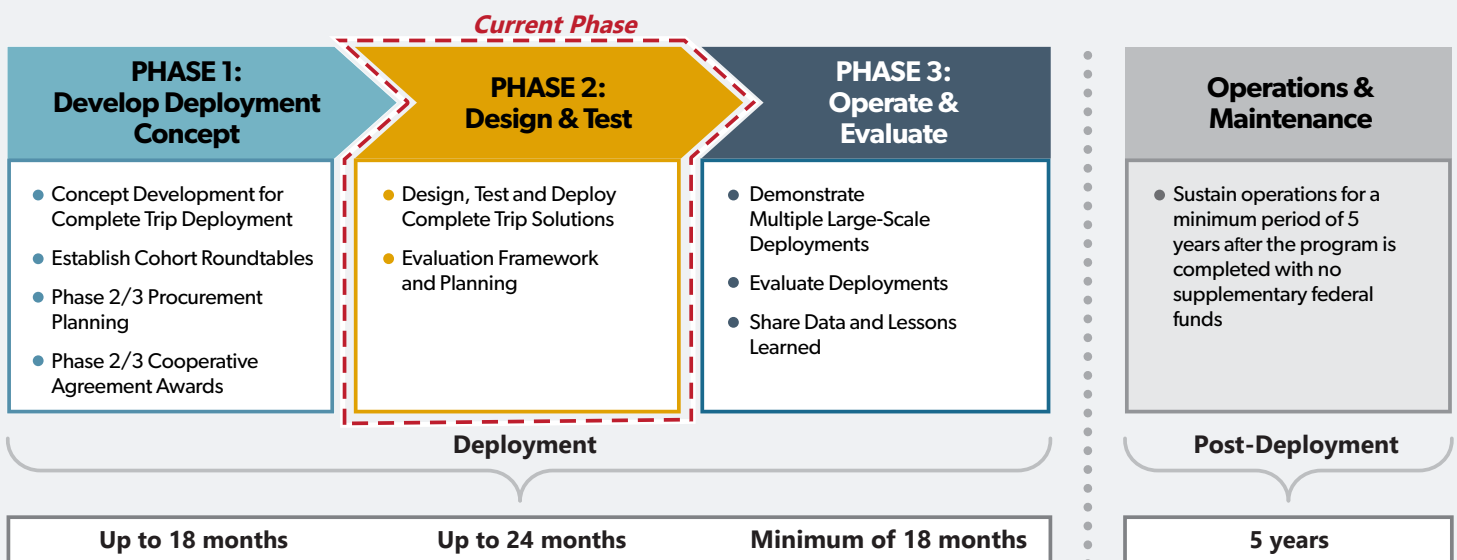

The ITS4US program will enable communities to build local partnerships and develop and deploy integrated, replicable mobility solutions to achieve complete trips for all travelers.

### ITS4US DEPLOYMENT PROGRAM PHASES

ITS4US Deployment Program was designed to fund multiple, large-scale, replicable deployments in three phases:

- Phase 1: Develop Deployment Concept
- Phase 2: Design & Test (Current Phase)
- Phase 3: Operate & Evaluate.

ITS4US Deployment sites that successfully completed Phase 1 were awarded Cooperative Agreements to conduct Phases 2 and 3 activities.

## ITS4US DEPLOYMENT PROGRAM PHASE 2 PROJECTS

Deployment Site	Project Description
 <p><b>Heart of Iowa Regional Transit Agency</b></p>	<p>The <b>Health Connector for the Most Vulnerable: An Inclusive Mobility Experience from Beginning to End</b> (Health Connector) Complete Trip deployment project in Dallas County, Iowa is led by the Heart of Iowa Regional Transit Agency (HIRTA). This project will implement a scalable and replicable solution that enables inclusive transportation access to healthcare for all underserved populations and their caregivers by resolving access to barriers with the use of advanced technologies. Further, this solution will include information and wayfinding services to guide users for every step of their trip. This deployment will provide enhanced access to healthcare options for “all travelers” in Dallas County.</p>
 <p><b>Georgia Department of Transportation</b></p>	<p>The <b>Safe Trips in a Connected Transportation Network</b> (ST-CTN) project is led by the Georgia Department of Transportation with support from the Atlanta Regional Commission in Gwinnett County, Georgia. The ST-CTN system will provide Gwinnett County residents with detailed information and step-by-step navigation tailored for users’ specific needs along with a range of other features geared to improve trip efficiency and safety. This concept is comprised of an integrated set of advanced transportation technology solutions including connected vehicles, transit signal priority, machine learning, and predictive analytics to support safe and complete trips, with a focus on accessibility for those with disabilities, aging adults, and those with limited English proficiency. The ST-CTN system includes a mobile application that will provide users with the ability to create a personalized trip plan with information on the navigation of physical infrastructure, provide users with safe alternative trip routes when encountering unexpected obstacles, and ensure user safety throughout the trip.</p>
 <p><b>University of Washington</b></p>	<p>The <b>Transportation Data Equity Initiative</b>, a Complete Trip deployment project led by the University of Washington, will span three states—Washington, Oregon, and Maryland. The project aims to create the foundational data tools necessary for both public and private entities to collect, share, manage, and use transportation data that provide equitable outcomes to all travelers regardless of location, income, or disability. This effort includes: 1) working with existing standards committees to extend and update three existing, early-stage international data standards—OpenSidewalks, GTFS-Flex, and GTFS-Pathways; 2) developing a series of tools that help agencies, jurisdictions, and other stakeholders collect the data that can be stored with these refined data standards; and 3) using three unique accessible mobility applications to demonstrate the different uses of the data.</p>
 <p><b>Niagara Frontier Transportation Authority</b></p>	<p>The <b>Complete Trip Deployment in Buffalo, New York</b>, led by the Niagara Frontier Transportation Authority, will improve mobility to, from, and within the Buffalo Niagara Medical Campus (BNMC) by deploying new and advanced technologies focused on addressing existing mobility and accessibility challenges. The project integrates an accessible trip planning tool with current transit services, indoor/outdoor wayfinding, community-based on-demand shuttle services that include a fleet of fully autonomous shuttles, and intersection pedestrian safety technologies aimed at providing complete trip support to travelers with disabilities in BNMC and neighboring communities. Central to the project is a complete trip platform that can factor in travelers’ preferences and accessibility-related needs in providing comprehensive trip planning and execution support to registered users. The platform, accessed both offline and online via multiple interfaces including an app, will integrate with multiple enabling technologies and services including fixed-route transit, community shuttles, smart intersections that use tactile and mobile technologies to assist travelers with disabilities in navigating intersections safely, and wayfinding infrastructure such as smart signs and information hubs to support outdoor and indoor navigation.</p>
