ITS Professional Capacity Building Program / Advancing ITS Education

About | ITS Training | Knowledge Exchange | Technology Transfer | ITS in Academics | Media Library

WHAT'S NEW

New Web-Based Training from ITS Joint Program Office

- Connected Vehicle Reference Implementation Architecture Training now available

New NHI Course

- Systems Engineering for Signal Systems Including Adaptive Control (NHI-133123)

New ITS Case Study Available

- National ITS Architecture

Added to T3 Archive

- Learn from the Experts: Open Data Policy Guidelines for Transit - Maximizing Real Time and Schedule Data-Legalities, Evolutions, Customer Perspectives, Challenges, and Economic Opportunities - Part II  
Presented on August 7, 2014
- Saving Lives and Keeping Traffic Moving: Quantifying the Outcomes of Traffic Incident Management (TIM) Programs  
Presented on July 31, 2014

Welcome to ITS Professional Capacity Building  
The ITS PCB Program is the U.S. Department of Transportation's leading program for delivering ITS training and learning resources to the nation's ITS workforce.

FREE TRAINING

The ITS PCB Program and partners offer many free ITS training courses.

- Web and Blended Courses from CITE
- ITS Standards Training
- Upcoming T3 Webinars

# **ITS Transit Standards Professional Capacity Building Program**

## **Module 6: Traveler Information, Part 1 of 2**

# A C T I V I T Y

# Instructor

Carol L. Schweiger  
President  
Schweiger Consulting LLC  
Wakefield, MA, USA

# Target Audience

- Transit management staff;
- Transit agency procurement and grants staff;
- Transit information technology staff and third-party content providers;
- Transit technology vendors and consultants; and
- Transportation Management Center/Transportation Operations Center staff.

# Recommended Prerequisite(s)

|  | Decision-Maker | Project Manager | Project Engineer |
|--|----------------|-----------------|------------------|
| <b>Module 1:</b><br>Introduction to ITS Transit Standards                          | ✓              | ✓               | ✓                |
| <b>Module 2:</b><br>Transit Management Standards, Part 1 of 2                      | ✓              | ✓               | ✓                |
| <b>Module 3:</b><br>Transit Communications Interface Profiles (TCIP), Part 1 of 2  | ✓              | ✓               | ✓                |
| <b>Module 4:</b><br>Transit Communications Interface Profiles, (TCIP), Part 2 of 2 | N/A            | ✓               | ✓                |
| <b>Module 5:</b><br>Transit Management Standards, Part 2 of 2                      | N/A            | ✓               | ✓                |

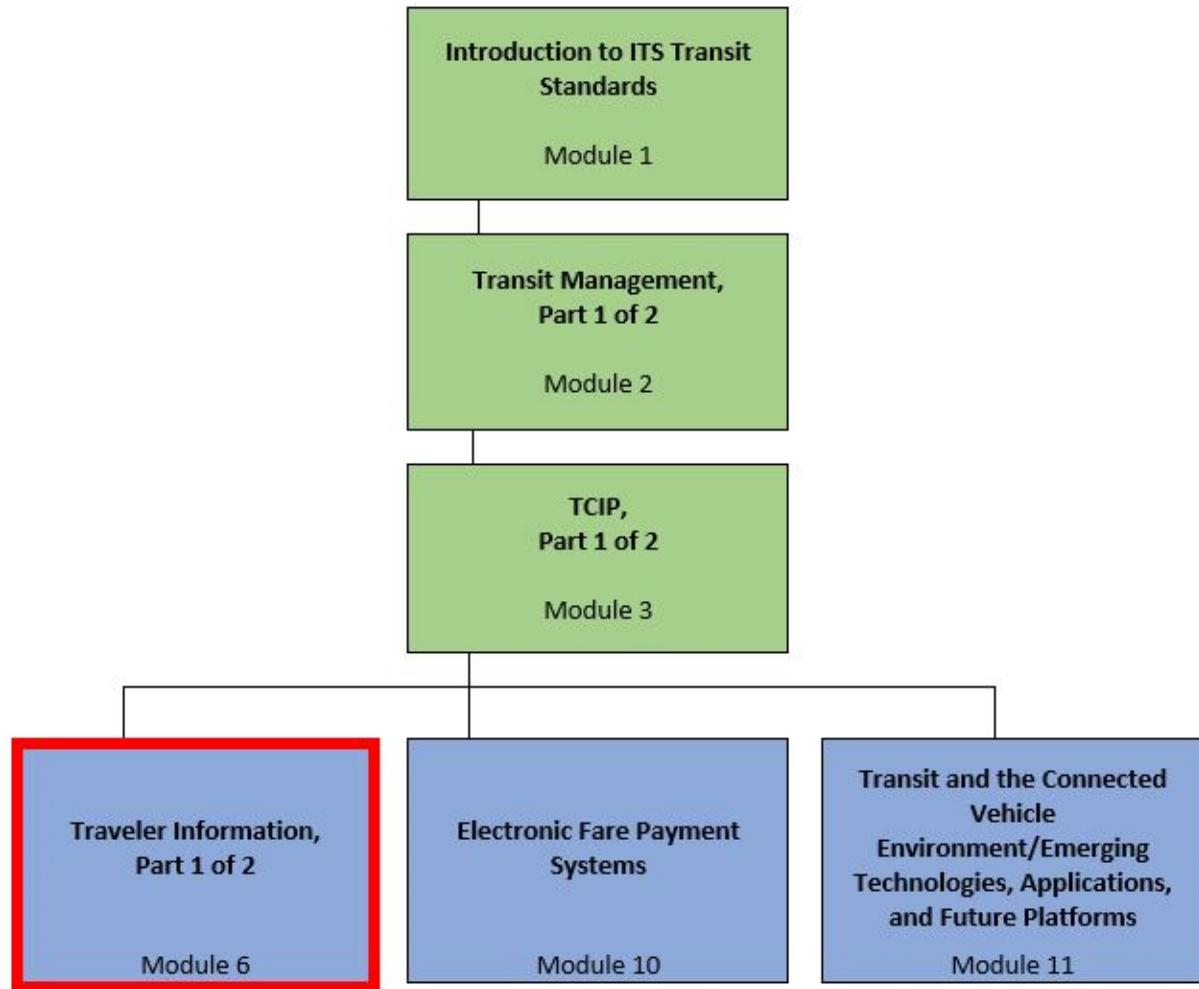

# Recommended Prior Knowledge

- Basic understanding of traveler information, which can be provided by:
  - ITS PCB Program's ITS ePrimer, Module 7: Public Transportation
- General understanding of the technology that is used to generate and disseminate traveler information, which can be provided by:
  - ITS PCB Program's ITS ePrimer, Module 7: Public Transportation
  - NTI course FTA/NTI ITS Workshop

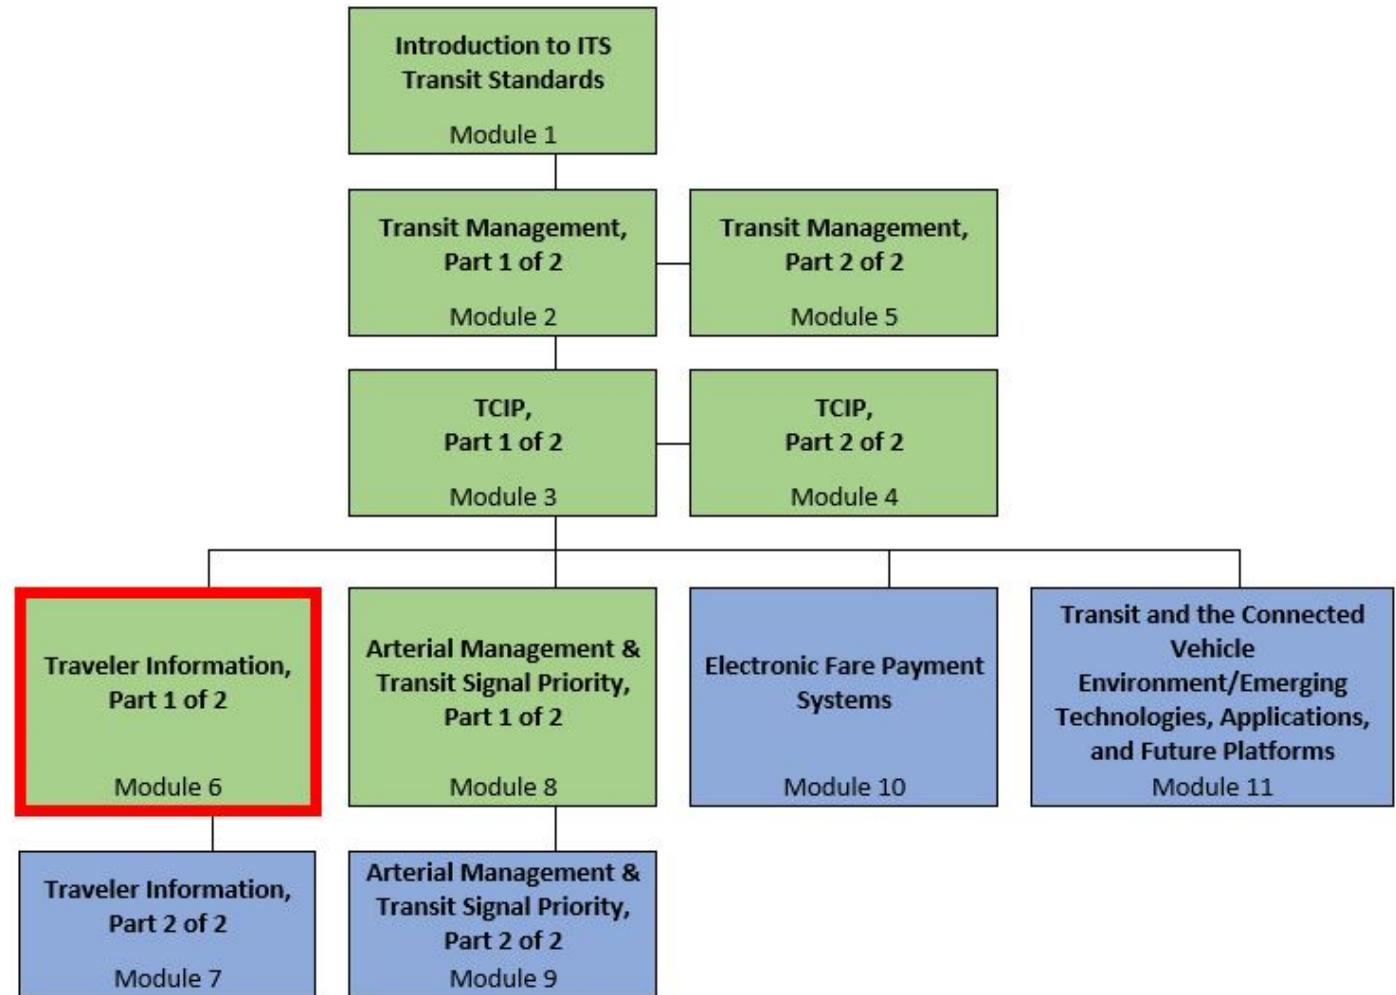

# Curriculum Path (Decision-Maker)

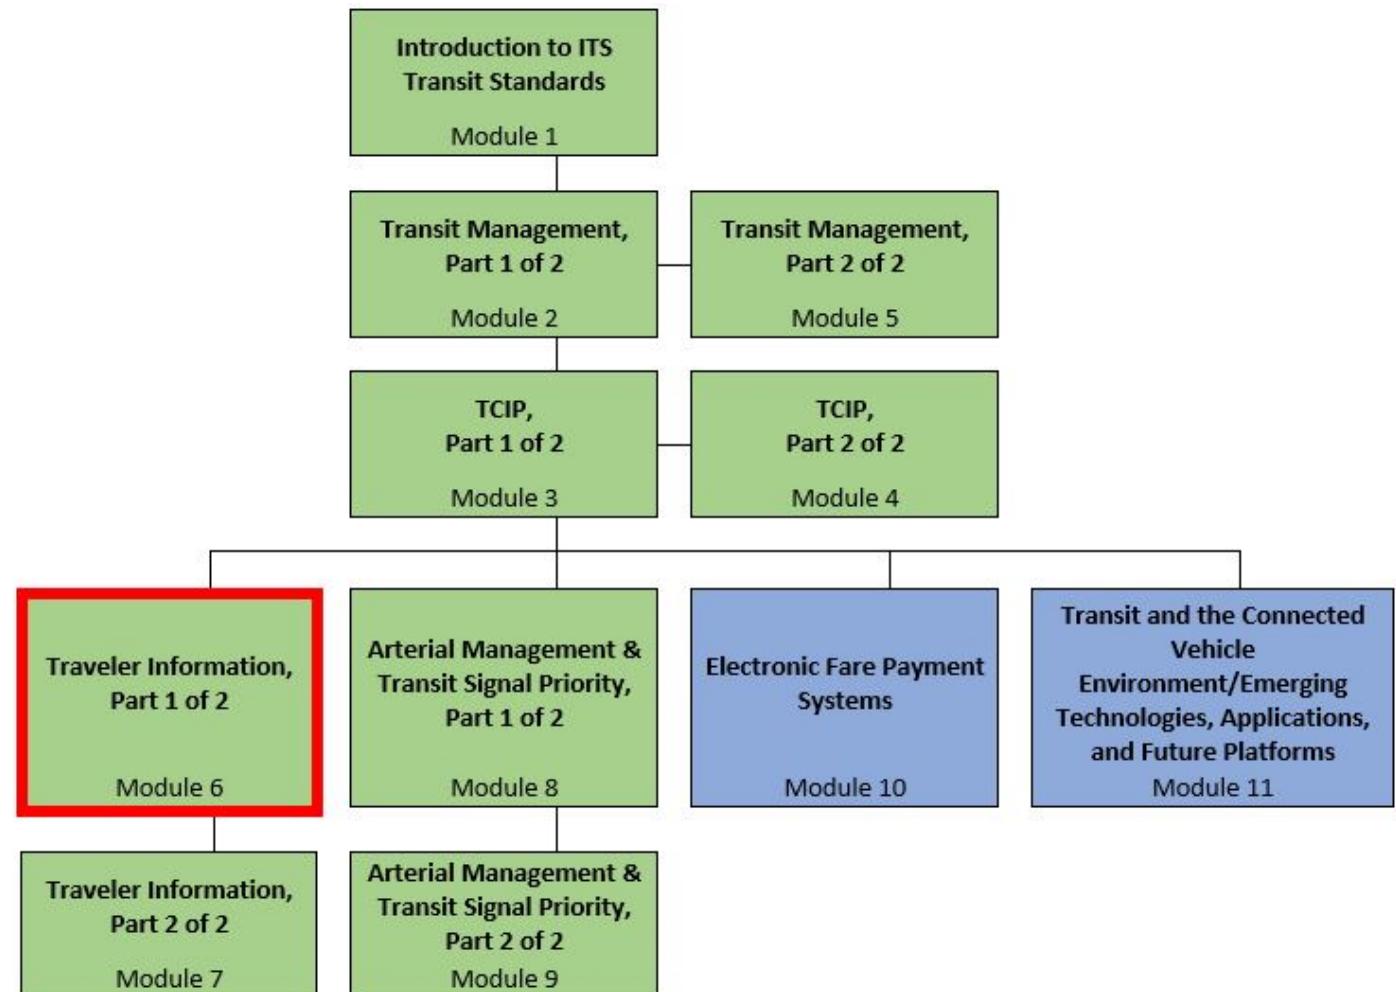

Recommended Prerequisite Modules

Optional Modules

# Curriculum Path (Project Manager)

# Curriculum Path (Project Engineer)

Recommended Prerequisite Modules

Optional Modules

# Learning Objectives

1. Describe (in overview terms) how traveler information systems fit into the National ITS Architecture
2. Describe the core functions and taxonomy of traveler information systems
3. Describe the functions of systems within the traveler Information and briefly identify the relationships and data exchange between transit management and traveler information systems taxonomy
4. Identify and describe how standards can be used to specify requirements for the procurement of traveler information systems
5. Explain the role of standards in traveler information systems procurement

# Learning Objective #1: Describe (in Overview Terms) How Traveler Information Systems Fit into the National ITS Architecture

- Brief review of key traveler information-related concepts within the National ITS Architecture
- Transit Traveler Information Service Package (SP)
- Related service packages (e.g., selected Traveler Information Service Packages)

## Traveler Information

- Customer-facing technologies provide public with information regarding trip planning and real-time operational information
- Generated by on-board and central systems (see next slide)
- Provided directly or indirectly (through open data) to public
- Where provided:
  - Pre-trip
  - En route
  - At wayside
  - Mobile/social media
- Categories: static and dynamic
- Various dissemination media

## Traveler Information (cont.)

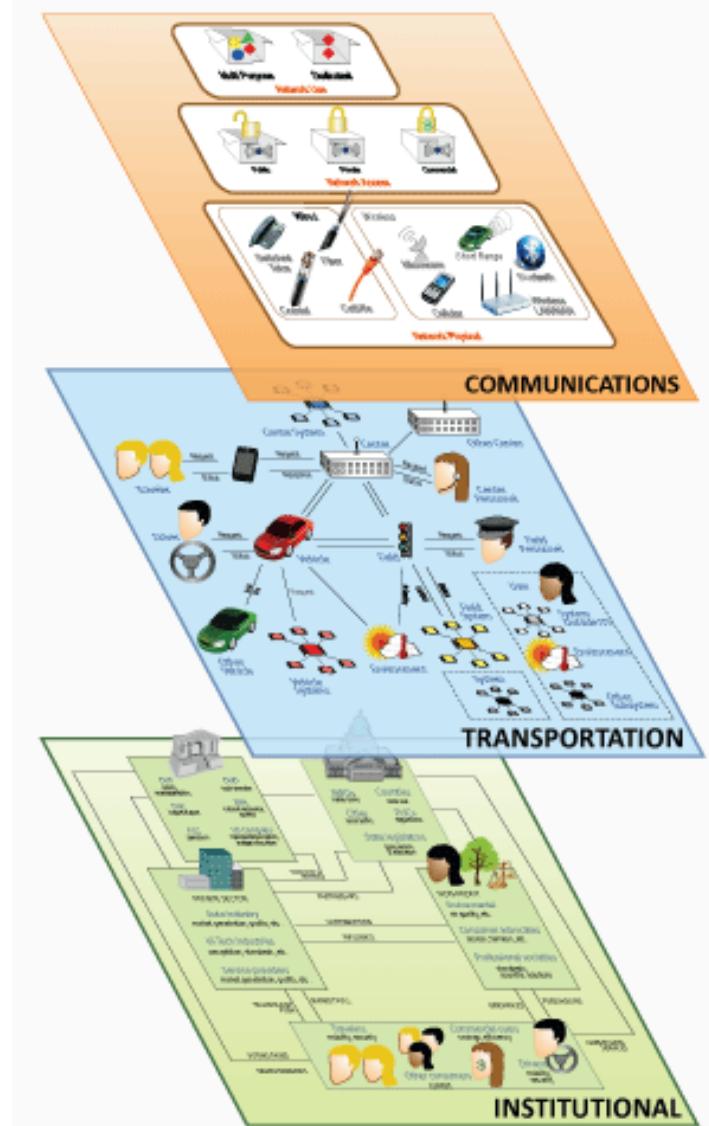

- Transportation layer most relevant:
  - 12 Traveler Information Service Packages
  - Communications – identifies four major types of communication to support the communications requirements
- Purpose of standards in an architecture:
  - Fundamental to open ITS environment
  - Facilitate deployment of interoperable systems

# Review of Architecture Layers

**Main Point:** The transportation layer is most relevant to traveler information.

- **Communications Layer** – provides for accurate and timely exchange of information between systems to support transportation solutions
  - **Transportation Layer** – where transportation solutions defined, including traveler information
  - **Institutional Layer** – institutions, policies, funding mechanisms and processes required for effective ITS implementation, operation, and maintenance. Shown as base because solid institutional support and effective decisions are prerequisites to an effective ITS program.

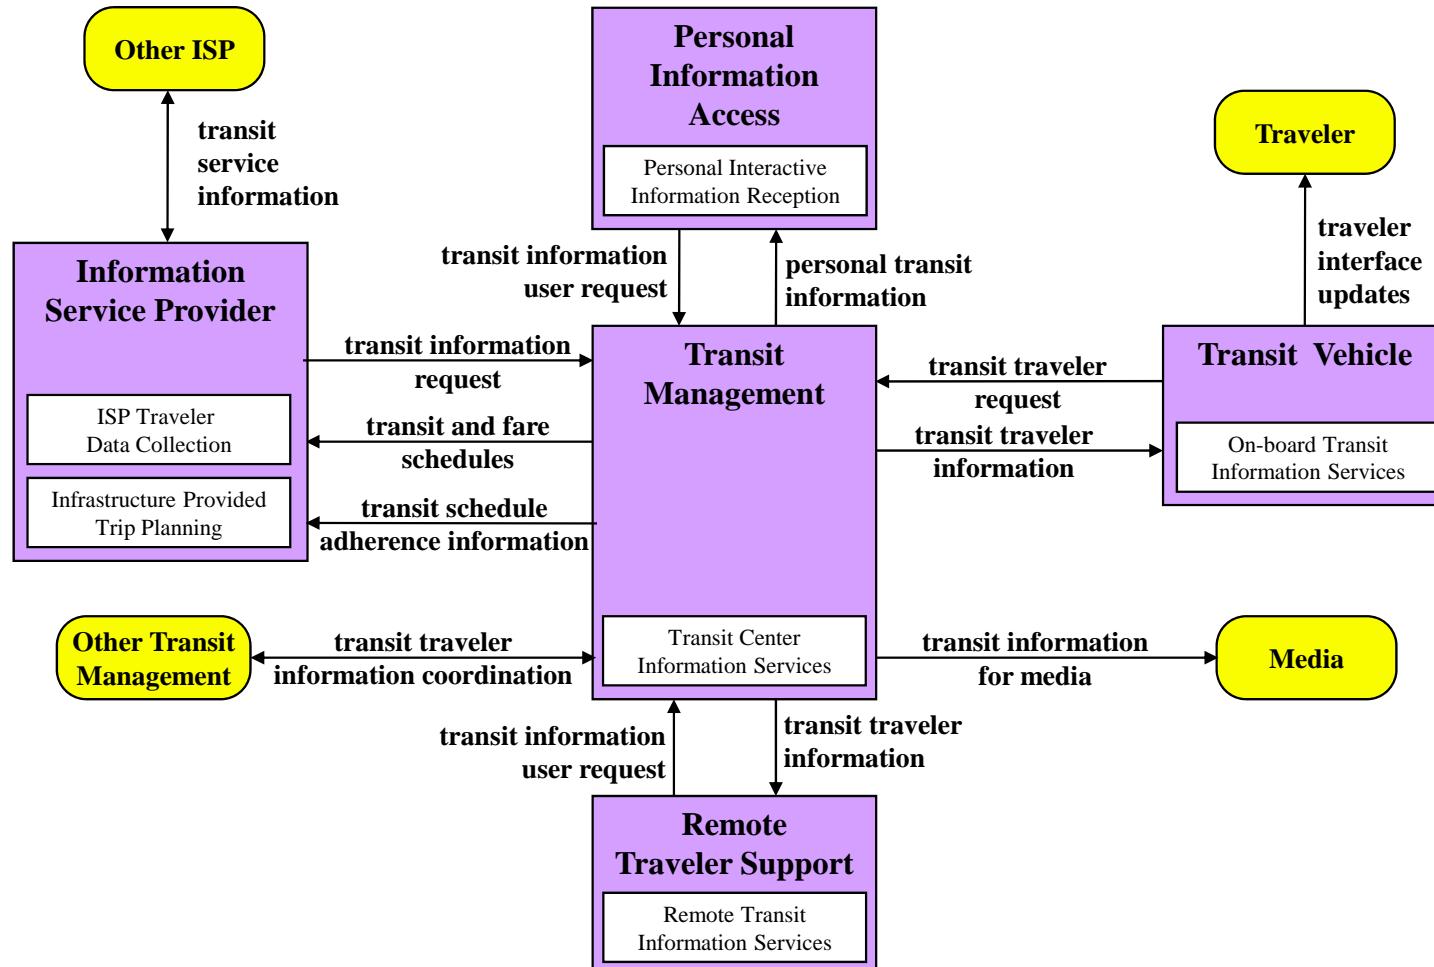

## Transit Traveler Information Service Package

- Pre-trip systems (e.g., itinerary planning software, Google Transit)
- On-board systems (e.g., automatic vehicle announcements [AVA])
- Wayside systems (e.g., electronic signage)
- Third-party smartphone applications and social media

# Transit Traveler Information Service Package

## APTS08 - Transit Traveler Information

# Transit Traveler Information Architecture Flows

| Source                       | Architecture Flow                         |           | Destination                  | In Graphic |
|------------------------------|---|-----------|------------------------------|------------|
| Information Service Provider | transit service information               | Standards | Other ISP                    | Yes        |
| Information Service Provider | transit information request               | Standards | Transit Management           | Yes        |
| Other ISP                    | transit service information               | Standards | Information Service Provider | Yes        |

| Remote Traveler Support      | traveler interface updates                |           | Traveler                     | No         |
| Transit Management           | transit and fare schedules                | Standards | Information Service Provider | Yes        |
| Transit Management           | transit schedule adherence information    | Standards | Information Service Provider | Yes        |
| Transit Management           | transit information for media             |           | Media                        | Yes        |
| Transit Management           | transit traveler information coordination | Standards | Other Transit Management     | Yes        |
| Transit Management           | personal transit information              | Standards | Personal Information Access  | Yes        |
| Transit Management           | transit traveler information              | Standards | Remote Traveler Support      | Yes        |
| Transit Management           | transit traveler information              | Standards | Transit Vehicle              | Yes        |
| Transit Vehicle              | transit traveler request                  | Standards | Transit Management           | Yes        |
| Transit Vehicle              | traveler interface updates                |           | Traveler                     | Yes        |
| Traveler                     | traveler inputs                           |           | Remote Traveler Support      | No         |
| Traveler                     | traveler inputs                           |           | Transit Vehicle              | No         |

Standards

This icon indicates that the associated architecture flow either has been or will be addressed by ITS Standards.

Select the architecture flow for more information on relevant standards activities.

# A C T I V I T Y

## Which one of these components is NOT in the Transit Traveler Information Service Package (SP)?

### Answer Choices

- a) On-board systems
- b) Wayside systems
- c) Dynamic ridesharing
- d) Pre-trip systems

## Review of Answers

- a) On-board systems

*Incorrect. On-board systems are included in this SP.*

- b) Wayside systems

*Incorrect. Wayside systems are included in this SP.*

- c) Dynamic ridesharing

**Correct! While dynamic ridesharing is a Traveler Information SP, it is not in the Transit Traveler Information SP.**

- d) Pre-trip systems

*Incorrect. Pre-trip systems are included in this SP.*

**When on the Transit Traveler Information Service Package web page in the National ITS Architecture literature, you can click on the architecture flow and it will show you the standards associated with that data exchange.**

## **Answer Choices**

- a) True
- b) False

## Review of Answers

- a) True

***Correct! You can use the information flow view of the Transit Traveler Information SP to determine which standards are associated with this SP.***

- b) False

*Incorrect. You can determine which standards are associated with architecture flows within the Transit Traveler Information SP by viewing the information flow in the National ITS Architecture documentation.*

## Other Traveler Information Service Packages

- **Broadcast Traveler Information** – collects data on multimodal travel conditions and broadcasts information directly to travelers using multiple technologies, or through information service providers (ISPs)
- **Interactive Traveler Information** – provides tailored information in response to a traveler request
- **ISP-Based Trip Planning and Route Guidance** – offers the user trip planning and en route guidance services
- **Transportation Operations Data Sharing** – makes real-time transportation operations data available to transportation system operators

## Other Traveler Information Service Packages (cont.)

- **Travel Services Information and Reservation** – provides travel information and reservation services to the user
- **Dynamic Ridesharing** – provides dynamic ridesharing/ride matching services to travelers
- **In-Vehicle Signing** – augments regulatory, warning, and informational signs and signals by providing information directly to drivers through in-vehicle devices
- **Short Range Communications Traveler Information** – provides location-specific or situation-relevant information to travelers in vehicles using dedicated short-range communications (DSRC) infrastructure supporting mobility applications for connected vehicles

## Other Traveler Information Service Packages (concluded)

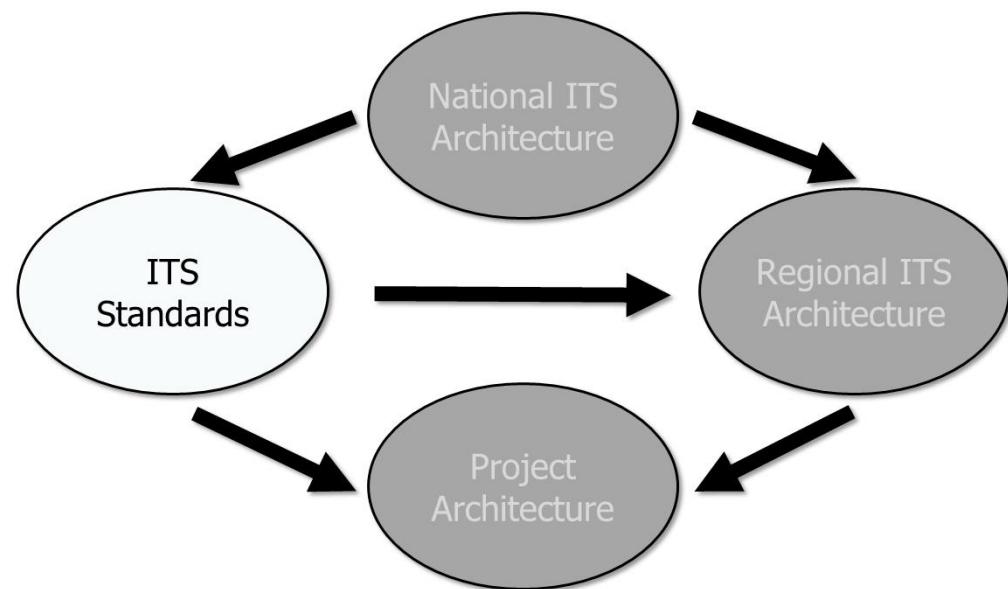

- **Wide-Area Alert** – uses ITS driver and traveler information systems to alert the public in emergency situations
- **Early Warning System** – monitors and detects potential, looming, and actual disasters including natural disasters and technological and man-made disasters
- **Disaster Traveler Information** – uses ITS to provide disaster-related traveler information to the general public, including evacuation and re-entry information and other information concerning the operation of the transportation system during a disaster

# Purpose of Standards in an Architecture

**Main Point:** Standards have a role in the National ITS Architecture as well as Regional ITS Architectures and Project Architecture.

- Fundamental to open ITS environment
- Facilitate deployment of interoperable systems
- This figure shows the relationship between ITS standards and architectures

# Summary of Learning Objective #1

## Describe (in Overview Terms) How Traveler Information Systems Fit into the National ITS Architecture

- The transportation layer is most relevant to traveler information
- Traveler information can be provided at any point in “trip chain”
- Transit Traveler Information SP covers:
  - Pre-trip systems
  - On-board systems
  - Wayside systems
  - Third-party applications and social media
- There are 11 other traveler information-related SPs

## Learning Objective #2: Describe the Core Functions and Taxonomy of Traveler Information Systems

- Pre-trip systems (e.g., itinerary planning software, Google Transit)
- On-board systems (e.g., automatic vehicle announcements [AVA])
- Wayside systems (e.g., electronic signage)
- Third-party applications and social media

## Pre-Trip Traveler Information

- **Definition:** Systems that provide information before taking a trip:
  - Proactive information provided regardless of user needs
  - Interactive information provided based on user needs upon request
- **Dimensions:**
  - Locations where information disseminated
  - Static and dynamic
  - Types (e.g., trip planning, estimated time of arrival for next vehicle)
  - Impacts

## Learning Objective #2

### Trip Planner

Start: Oak Grove Station

End: 38 Chauncy Street, Boston, MA 02111

Plan your trip using [Landmarks & Stations](#)

Depart    Arrive   04:24 PM   3/31/2015

Minimize Time and use all services

With a walking distance of 1/2 mile  Accessible trip

[Clear](#) [SUBMIT](#)

[Itinerary 1 - Approx. 19 mins. \(shown below\)](#)

[Itinerary 2 - Approx. 19 mins.](#)

**Itinerary 1 - Approx. 19 mins.** [Print](#)

Take Orange Line - Forest Hills To Downtown Crossing - To Forest Hills [view route](#)

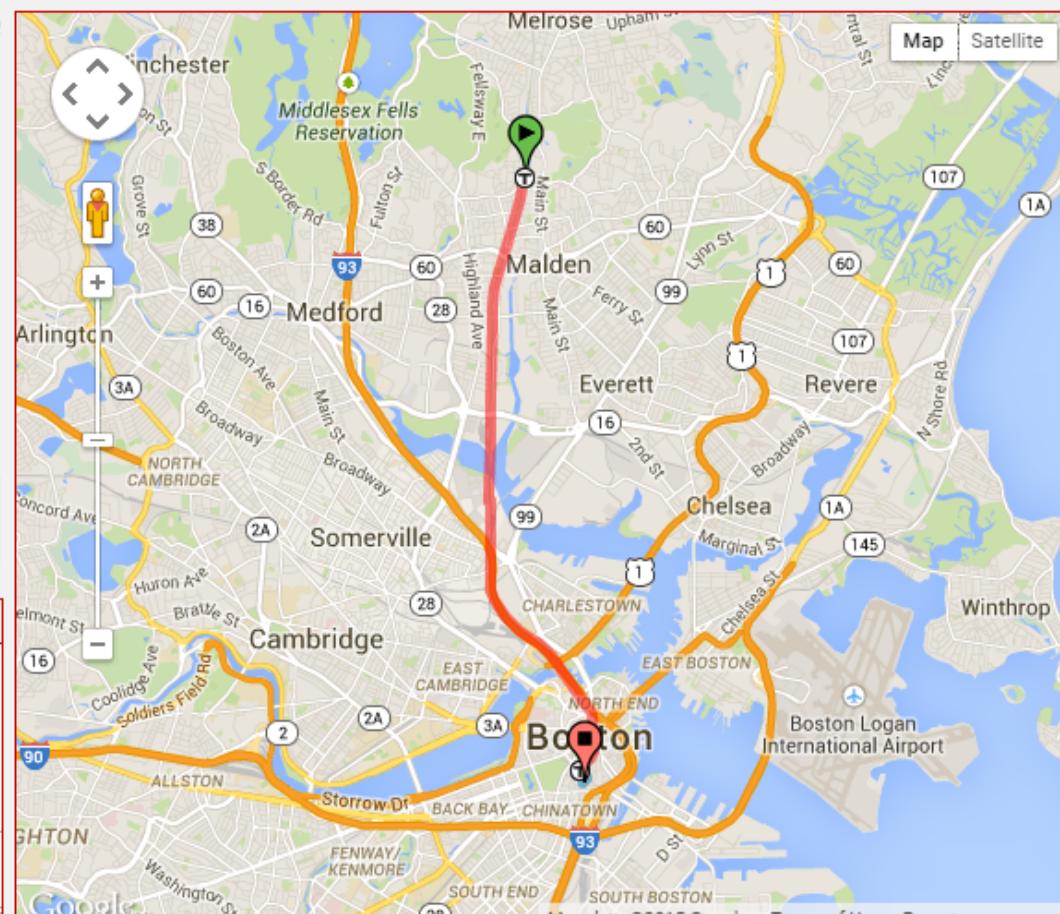

Approx. 4:25 PM Depart from [Oak Grove Station - Orange Line](#)

Approx. 4:41 PM Arrive at [Downtown Crossing - to Forest Hills](#)

Walk For 3 Mins. To 38 Chauncy Street, Boston, Ma 02111 [\[+\]](#)

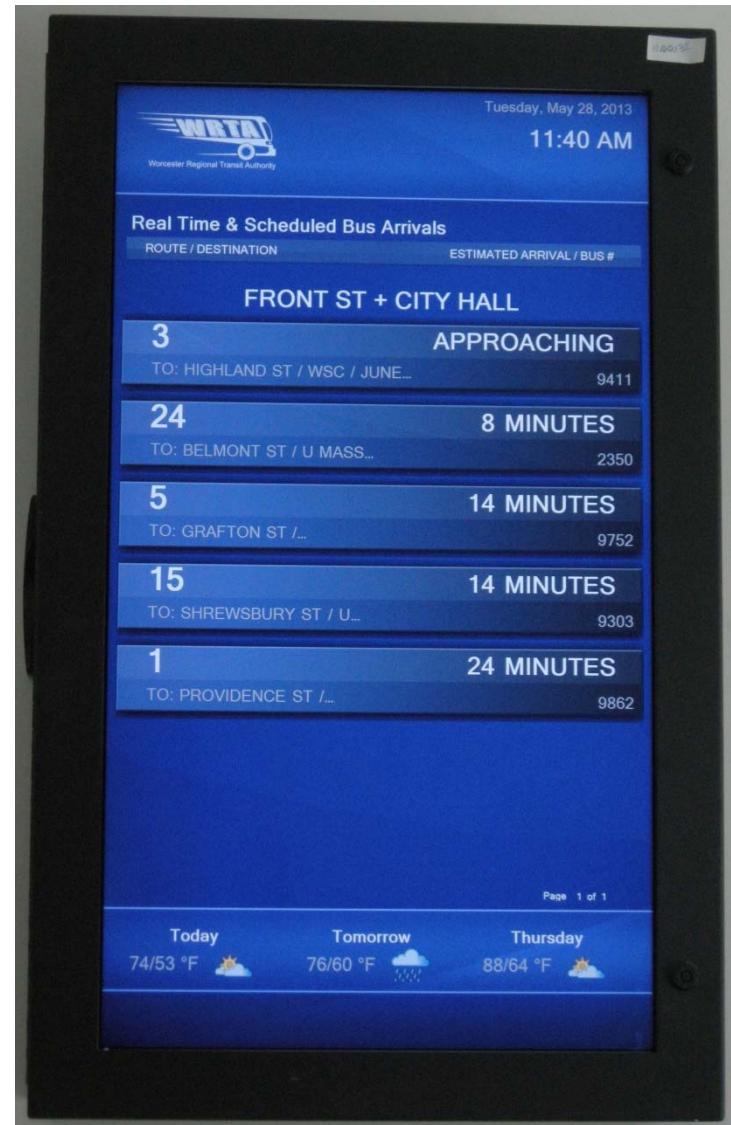

**COST:** Regular fare Senior/Disabled fare

\$2.65 \$1.05

## Locations Where Pre-Trip Information Disseminated

- On fixed devices – dynamic message signs and kiosks:
  - In dedicated locations (e.g., office building)
  - At transit stops and stations
- Mobile, such as on mobile phones

## Types of Pre-Trip Traveler Information

- Static (e.g., bus schedule, fares)
  - Trip itinerary (interactive)
  - Frequency of buses/trains, etc.
  - Fare cost
  - Possible interchanges
  - Facilities at stops/stations (e.g., parking)
- Dynamic information (e.g., arrival time of next vehicle)
  - Waiting time at the bus stop (proactive)
  - Travel time of route (proactive/interactive)
  - Weather conditions
  - Closure of stops/stations
  - Traffic disruption or rerouting

## Impacts of Pre-Trip Traveler Information

- Whether or not a trip is taken
- Time of departure
- Mode(s) used for the trip
- Route(s) used for the trip

# Pre-Trip Traveler Information

|                                  | When/Where |                  | What     |        | How           |                       | Custom |
|----------------------------------|------------|------------------|----------|--------|---------------|-----------------------|--------|
|                                  | Pre-trip   | Wayside/En route | On-board | Mobile | Trip planning | Real-time information |        |
| Printed Material                 | X          | X                | X        |        |               | X                     | X      |
| Telephone                        | X          |                  |          |        | X             | X                     | X      |
| Mobile Phone                     | X          | X                | X        | X      |               | X                     | X      |
| Smartphone                       | X          | X                | X        | X      | X             | X                     | X      |

# A C T I V I T Y

## In which location is Pre-Trip Traveler Information NOT provided?

### Answer Choices

- a) Via a mobile device
- b) On devices in dedicated locations
- c) On devices at transit stops/stations
- d) On board vehicles

## Review of Answers

- a) Via a mobile device

*Incorrect. Pre-trip traveler information is provided via mobile devices.*

- b) On devices in dedicated locations

*Incorrect. Pre-trip traveler information is provided via devices in dedicated locations.*

- c) On devices at transit stops/stations

*Incorrect. Pre-trip traveler information is provided via devices at transit stops/stations.*

- d) On board vehicles

***Correct! Pre-trip traveler information is NOT provided on board vehicles. Once an individual is on board a transit vehicle, they are no longer in the pre-trip stage of their trip.***

## On-Board Traveler Information

- **Definition:** Systems that provide static and real-time information on-board a transit vehicle
- **Static Types:**
  - Information on planned detours
  - Schedule information during special events
  - Information about non-motorized services
  - Services available at upcoming stops (e.g., carshare)
- **Dynamic Types:**
  - Name/location of upcoming stops
  - Emergency information
  - Vehicles/routes available for transfer
  - Display/announcement of the current route
  - Real-time elevator/escalator availability

## On-Board Traveler Information (cont.)

|                                  | When/Where            |                    | What          |        | How       |             |        |
|----------------------------------|-----------------------|--------------------|---------------|--------|-----------|-------------|--------|
|                                  | Real-time information | Static information | Trip planning | Mobile | Proactive | Interactive | Custom |
| Pre-trip                         | On-board              |                    |               |        |           |             |        |
| Printed Material                 | X                     | X                  | X             |        | X         | X           |        |
| Telephone                        | X                     |                    |               | X      | X         | X           | X      |
| Mobile Phone                     | X                     | X                  | X             | X      | X         | X           | X      |
| Smartphone                       | X                     | X                  | X             | X      | X         | X           | X      |
| E-mail                           | X                     | X                  | X             | X      | X         | X           | X      |
| Short message service (SMS)      | X                     | X                  | X             | X      |           | X           | X      |
| Other mobile devise (e.g., iPad) | X                     | X                  | X             | X      | X         | X           | X      |

| Interactive voice response       | X                     |                    |               | X      | X         | X           | X      |

## Wayside Traveler Information

- **Definition:** Systems that provide static and real-time information at the wayside
- **Static Types:**
  - Schedule information
- **Dynamic Type Examples:**
  - Availability of information dissemination
  - Identification of service disruptions
  - Next vehicle arrival prediction time
  - Schedule information during special events
  - Emergency information (e.g., evacuation due to fire)
  - Real-time information on availability of elevators and escalators

# Wayside Traveler Information

| E-mail                           | X          | X                | X        | X      |                       | X                  | X           | X         |
| Short message service (SMS)      | X          | X                | X        | X      |                       | X                  | X           | X         |
| Other mobile devise (e.g., iPad) | X          | X                | X        | X      | X                     | X                  | X           | X         |
| Internet/Website                 | X          |                  |          |        | X                     | X                  | X           | X         |
| Kiosk                            | X          | X                |          |        | X                     | X                  |             | X         |
| Television                       | X          |                  |          |        | X                     | X                  | X           |           |
| Dynamic message sign             |            | X                | X        |        | X                     | X                  | X           |           |
| Annunciator                      |            | X                | X        |        |                       | X                  | X           |           |
| Social media                     | X          |                  |          | X      |                       | X                  | X           |           |
| Interactive voice response       | X          |                  |          | X      | X                     | X                  | X           | X         |

# A C T I V I T Y

**Which type of dissemination media is NOT used to provide traveler information at the wayside/en route?**

### **Answer Choices**

- a) Dynamic message sign (DMS)
- b) Kiosk
- c) Television
- d) Smartphone

## Review of Answers

- a) Dynamic message sign (DMS)

*Incorrect. A DMS can be used to provide traveler information at the wayside/en route.*

- b) Kiosk

*Incorrect. A kiosk can be used to provide traveler information at the wayside/en route.*

- c) Television

**Correct! Television is not used to provide traveler information at the wayside/en route.**

- d) Smartphone

*Incorrect. A smartphone can be used to provide traveler information at the wayside/en route.*

## Third-Party Applications and Social Media

- **Definition:** Applications use open, proprietary, or internal transit operations data to provide traveler information
- Types of traveler information provided by third-party applications:
  - Next vehicle arrival/departure prediction time
  - Identification of service disruptions
  - Schedule information during special events
  - Information on planned detours
  - Real-time vehicle location
  - Emergency information
  - Comparative modal travel times
  - Energy usage
- Social media being used to provide:
  - Real-time service alerts
  - Static service information

# Third-Party Applications and Social Media

|                                  | When/Where |                  |          | What   |                       | How                |           |             |        |
|----------------------------------|------------|------------------|----------|--------|-----------------------|--------------------|-----------|-------------|--------|
|                                  | Pre-trip   | Wayside/En route | On-board | Mobile | Real-time information | Static information | Proactive | Interactive | Custom |
| Printed Material                 | X          |                  | X        |        | X                     |                    | X         | X           |        |
| Telephone                        | X          |                  |          |        | X                     | X                  | X         | X           |        |
| Mobile Phone                     | X          | X                | X        | X      | X                     | X                  | X         | X           | X      |
| Smartphone                       | X          | X                | X        | X      | X                     | X                  | X         | X           | X      |
| E-mail                           | X          | X                | X        | X      |                       | X                  | X         | X           | X      |
| Short message service (SMS)      | X          | X                | X        | X      |                       |                    | X         | X           | X      |
| Other mobile devise (e.g., iPad) | X          | X                | X        | X      | X                     | X                  | X         | X           | X      |
| Internet/Website                 | X          |                  |          |        | X                     | X                  | X         | X           | X      |
| Kiosk                            | X          | X                |          |        | X                     | X                  |           |             | X      |
| Television                       | X          |                  |          |        |                       | X                  | X         | X           |        |
| Dynamic message sign             |            | X                | X        |        |                       | X                  | X         | X           |        |
| Annunciator                      |            | X                | X        |        |                       |                    | X         | X           |        |
| Social media                     | X          |                  |          | X      |                       |                    | X         | X           |        |
| Interactive voice response       | X          |                  |          | X      | X                     | X                  | X         | X           | X      |

## Summary of Learning Objective #2

### Describe the Core Functions and Taxonomy of Traveler Information Systems

- Pre-trip traveler information impacts include whether or not the trip is taken, and which mode and route are used
- DMS is one type of dissemination media to display traveler information at wayside/en route
- On-board traveler information includes name/location of and services available at upcoming stops
- Third-party applications are overwhelmingly the approach transit agencies are taking to provide information on smartphones
- Social media is being used to provide real-time service alerts and static service information

# **Learning Objective #3: Describe the Functions of Systems Within Traveler Information and Briefly Identify the Relationships and Data Exchange Between Transit Management and Traveler Information Systems**

- On-board automated voice announcements (AVA)
- En route/wayside traveler information, including real-time arrival/departure information in a variety of dissemination media
- 511, 311, and 211 systems, and Google Transit
- Third-party applications and social media

# On-Board Automated Voice Announcements (AVA)

- **Definition:** Provides audio and visual announcements to on-board riders and those waiting to board
- **Function:** As fixed-route vehicle approaches a stop or other designated location:
  - Digitally recorded announcement automatically made over on-board public address system speakers
  - Displayed on DMS inside vehicle to inform passengers about upcoming stops, major intersections, and landmarks
  - Can make time-based, location-based, and vehicle operator-initiated announcements/displays
  - Supports compliance with the Americans with Disabilities Act (ADA)
- **Dependent on:**
  - AVL system
  - Route and vehicle schedule data

# AVA Example: Worcester Regional Transit Authority

- 46 fixed-route vehicles equipped with AVA
- Lessons learned:
  - Needed to shorten length of announcements
  - During design, a feature that had not been considered was defined – looping of announcements at terminals
  - Trip patterns had to be validated
  - Volume with which announcements were made on board had to be addressed
  - Implementation of Spanish announcements (in addition to English) cancelled due to differences associated with translating announcements into Spanish

# A C T I V I T Y

**Can an on-board automated voice announcement (AVA) system be used to comply, in part, with the Americans with Disabilities Act (ADA)?**

### **Answer Choices**

- a) Yes
- b) No

## Review of Answers

a) Yes

***Correct! An on-board automated voice announcement (AVA) system can be used to comply, in part, with the Americans with Disabilities Act (ADA).***

b) No

*Incorrect. An on-board automated voice announcement (AVA) system can be used to comply, in part, with the ADA.*

## En Route/Wayside Traveler Information

- **Definition:** Provides both real-time and static information using various types of dissemination media
- **Function:**
  - CAD/AVL systems generate schedule adherence information
  - Schedule adherence information is combined with other conditions (e.g., speed of vehicle) to calculate when a vehicle will arrive at upstream stops
  - Estimated time of arrival displayed at wayside at upstream stops or via the Internet or mobile applications
- **Dependent on:**
  - Route and vehicle schedule data
  - AVL system
  - CAD system
  - Data communications technologies

## En Route/Wayside Trip Chain Locations

- At the origin of the trip
- Between the origin and the first transit stop of the trip
- At a bus stop, station platform, station entrance, and common area, or terminal location
- On board a vehicle (inside a tunnel or at the surface)
- At a park-and-ride location
- Between the final stop and destination

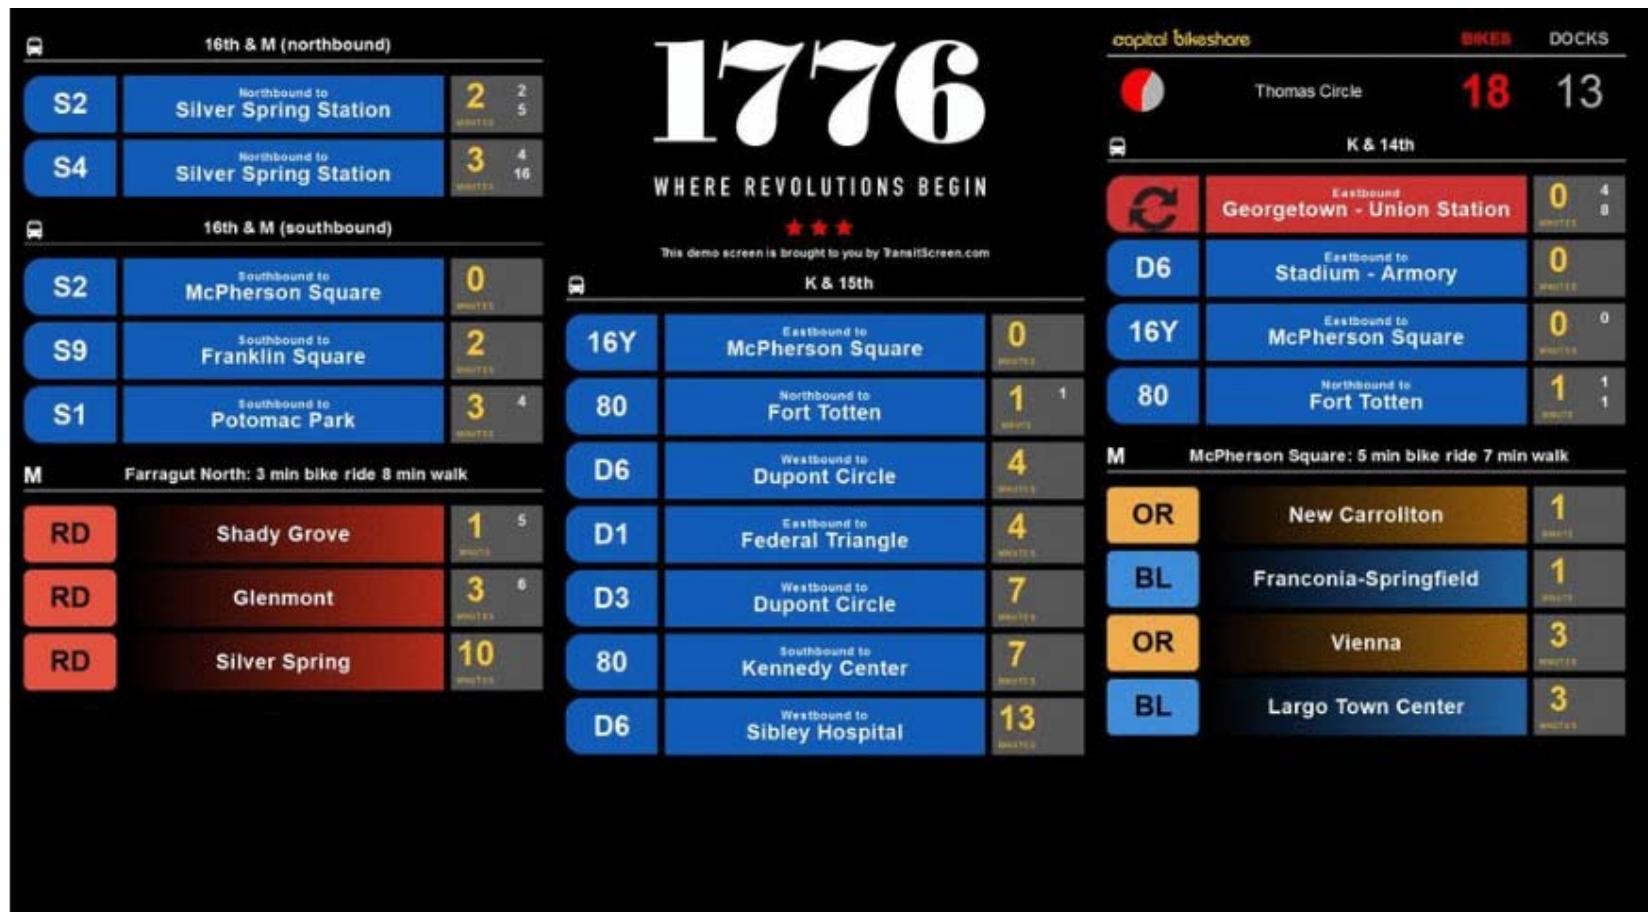

## Dissemination Media and Standards

- Dynamic message sign (DMS)
  - Internet or mobile internet
  - Interactive voice response (IVR) system
  - Short message service (SMS) (a.k.a. text message)
  - Smartphone application (see a section later in this module)
  - Social media (e.g., Facebook)
  - Alerts that are pushed to a customer based on registered preferences
  - Staffed customer information service available by telephone
- 

- Different standards facilitate the use of each of these technologies where standards exist

# Mobility Lab (Now TransitScreen) Example

## Learning Objective #3

### DMS Examples

# 511, 311, and 211 Systems

- **Definition:**

- 511 provides statewide and/or regional traveler information
- 311 used for locally/regionally operated, staffed (live operator) phone systems for “non-emergency policy and other government services” information
- 211 used for locally/regionally operated “community information and referral services” phone systems

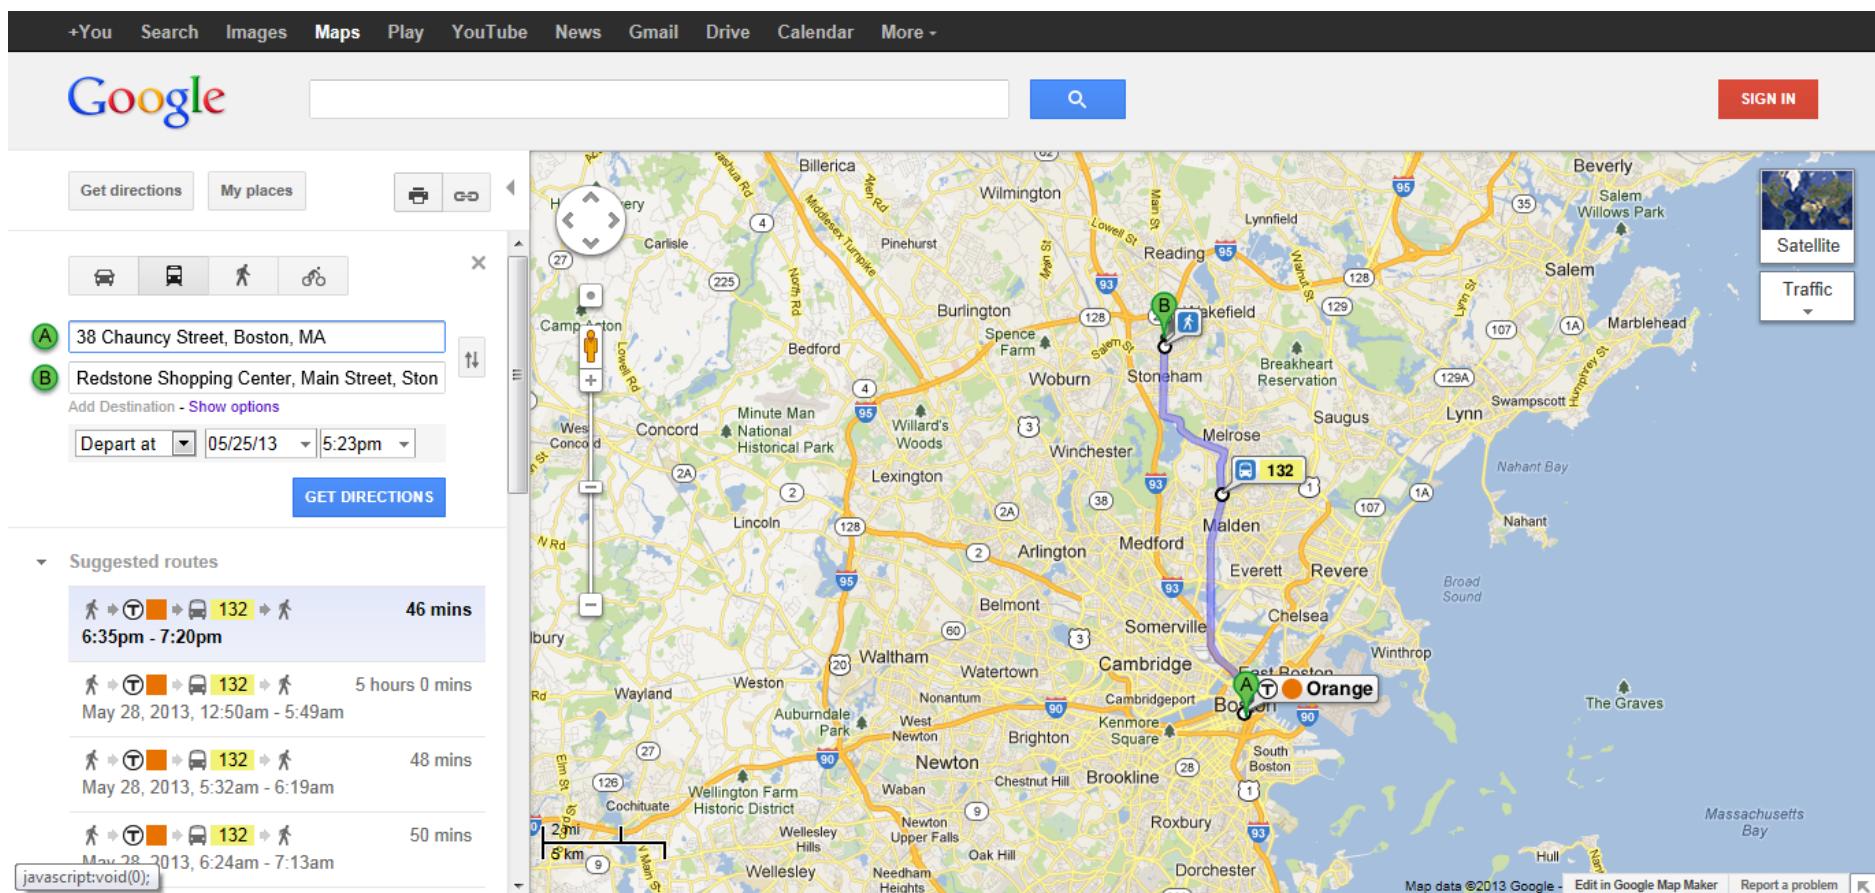

- **Function:** 511, 311, and 211 systems are Federal Communications Commission (FCC)-designated phone numbers
- **Dependent on:** Open data

# Google Transit

- **Definition:** Web-based application that imports agency data in specific file formats to provide portal for transit trip planning using Google Maps
- **Features:**
  - Regional trip planning tools
  - Origin and destination locations
  - Google Maps features
  - Google Point-of-Interest (POI) search around stop location
  - Walk directions with turn-by-turn guidance
  - Google Transit and Google Directions on same portal for trips that require both options
  - Over 800 cities covered throughout the world as of January 2015

# Google Transit Example

## Google Live Transit Updates

- Based on use of GTFS-realtime (de-facto standard)
- Can be seen on <https://developers.google.com/transit/google-transit#LiveTransitUpdate>
- Live Transit Updates:
  - Provide real-time transit updates to users of Google Maps and Google Maps for mobile
  - Include live departure and arrival times to transit stations, as well as service alerts
  - Provide two types of real-time updates to users:
    - Live departure times
    - Service alerts

## Third-Party Trip Planning

- Bing Maps – transit routing and real-time information using GTFS
- MapQuest – transit and walking directions in 2011
- HopStop:
  - Provides door-to-door walking, biking, transit, taxi and hourly car rental directions
  - Intra-city and city-to-city travel
  - Includes real-time social transit app
- goroo® provides:
  - Directions using combination of bus/train routes, driving, biking and walking directions
  - Travel itineraries, public transit schedules, maps, alternative routes, area attractions, travel alerts, and suggested ways to reduce your carbon footprint

# Third-Party Applications and Social Media

- **Definition:**

- Third-party applications provide static and real-time information based on open data provided by transit agencies
- Social media being used by transit agencies to provide real-time service alerts and static service information

- **Function:**

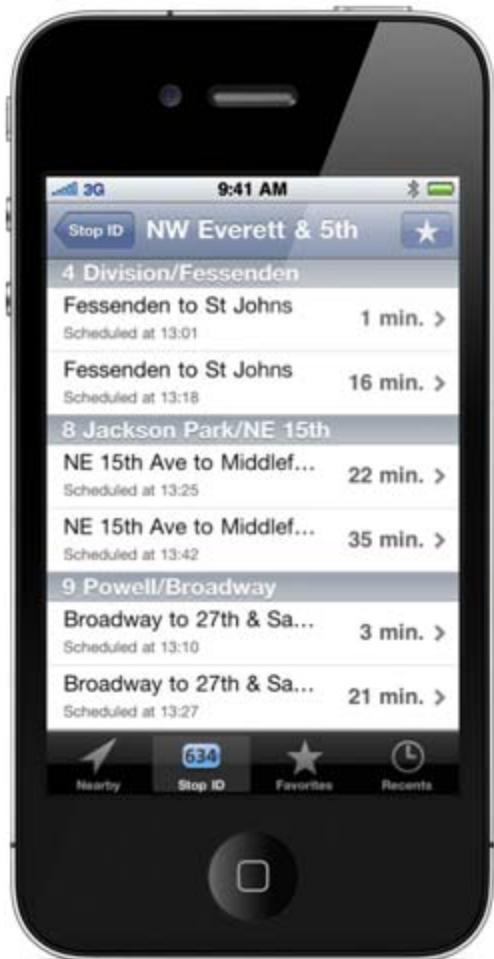

- Third-party applications function differently based on information being provided
- Social media functions

- **Dependent on:**

- Open data
- Private or proprietary data within transit agency

# Third-Party Smartphone Applications

OneBusAway for Seattle Area  
Where's my MBTA Bus?

- OneBusAway for Seattle Area:** Shows bus arrival times at NW Everett & 5th. For example, Fessenden to St Johns is scheduled at 13:01 and will arrive in 1 min.
- Where's my MBTA Bus?**: A mobile application for the Massachusetts Bay Transportation Authority. It asks for route selection (Inbound, Outbound, Inbound & Outbound) and shows the last stop for route 57 (Commonwealth Ave @ Silber Way, Watertown Yard via Brighton). It also lists other routes and allows users to add favorites or show on map.
- Prediction**: Shows bus arrival times for route 57. Bus 0493 arrives in 4 min, Bus 0578 in 12 min, Bus 0545 in 20 min, and Bus 0462 in 28 min. It also lists other routes like Route 57A.
- Map**: A map of Boston showing the route of bus 0493. The bus is currently at "Silmore Dr" and is expected to arrive at "Commonwealth Ave @ Silber Way" in 4 minutes. The map includes street names like North Brookline, Beacon St, and Fenway/Kenmore.

# Traveler Information Dependencies

| Category             | System/Technology  | Dependent on   |
|----------------------|--|--|
| Traveler Information | On-board automated voice announcements (AVA)   | <ul style="list-style-type: none"><li>• AVL system</li><li>• Route and vehicle schedule data</li></ul>   |
|                      | En route/wayside traveler information, including real-time arrival/departure information in a variety of dissemination media | <ul style="list-style-type: none"><li>• Route and vehicle schedule data</li><li>• AVL system</li><li>• CAD system</li><li>• Data communications technologies</li></ul> |
|                      | On-board Internet access for passengers  | Data communications technologies   |
|                      | 511, 311, and 211 systems, and Google Transit  | Open data  |
|                      | Third-party smartphone applications  | Open data  |

# A C T I V I T Y

## **En route/wayside information is NOT dependent on which system?**

### **Answer Choices**

- a) Data communications technologies
- b) Open data
- c) Route and vehicle schedule data
- d) AVL system

## Review of Answers

- a) Data communications technologies

*Incorrect. En route/wayside information is dependent on data communications technologies.*

- b) Open data

***Correct! En route/wayside information is not typically dependent on open data, although it could be.***

- c) Route and vehicle schedule data

*Incorrect. En route/wayside information is dependent on route and vehicle schedule data.*

- d) AVL system

*Incorrect. En route/wayside information is dependent on an AVL system.*

## **Summary of Learning Objective #3**

### **Describe Functions of Systems Within Traveler Information and Identify Relationships and Data Exchange Between Transit Management and Traveler Information Systems**

- Variety of dissemination media that use different standards
- 511, 311, and 211 phone numbers were designated by FCC
- Third-party tools use standards and formats such as GTFS and GTFS-real-time
- Third-party smartphone applications use open data provided by transit agencies
- Social media provides traveler information, mostly real-time service alerts

# **Learning Objective #4: Identify and Describe How Standards Can Be Used to Specify Requirements for the Procurement of Traveler Information Systems**

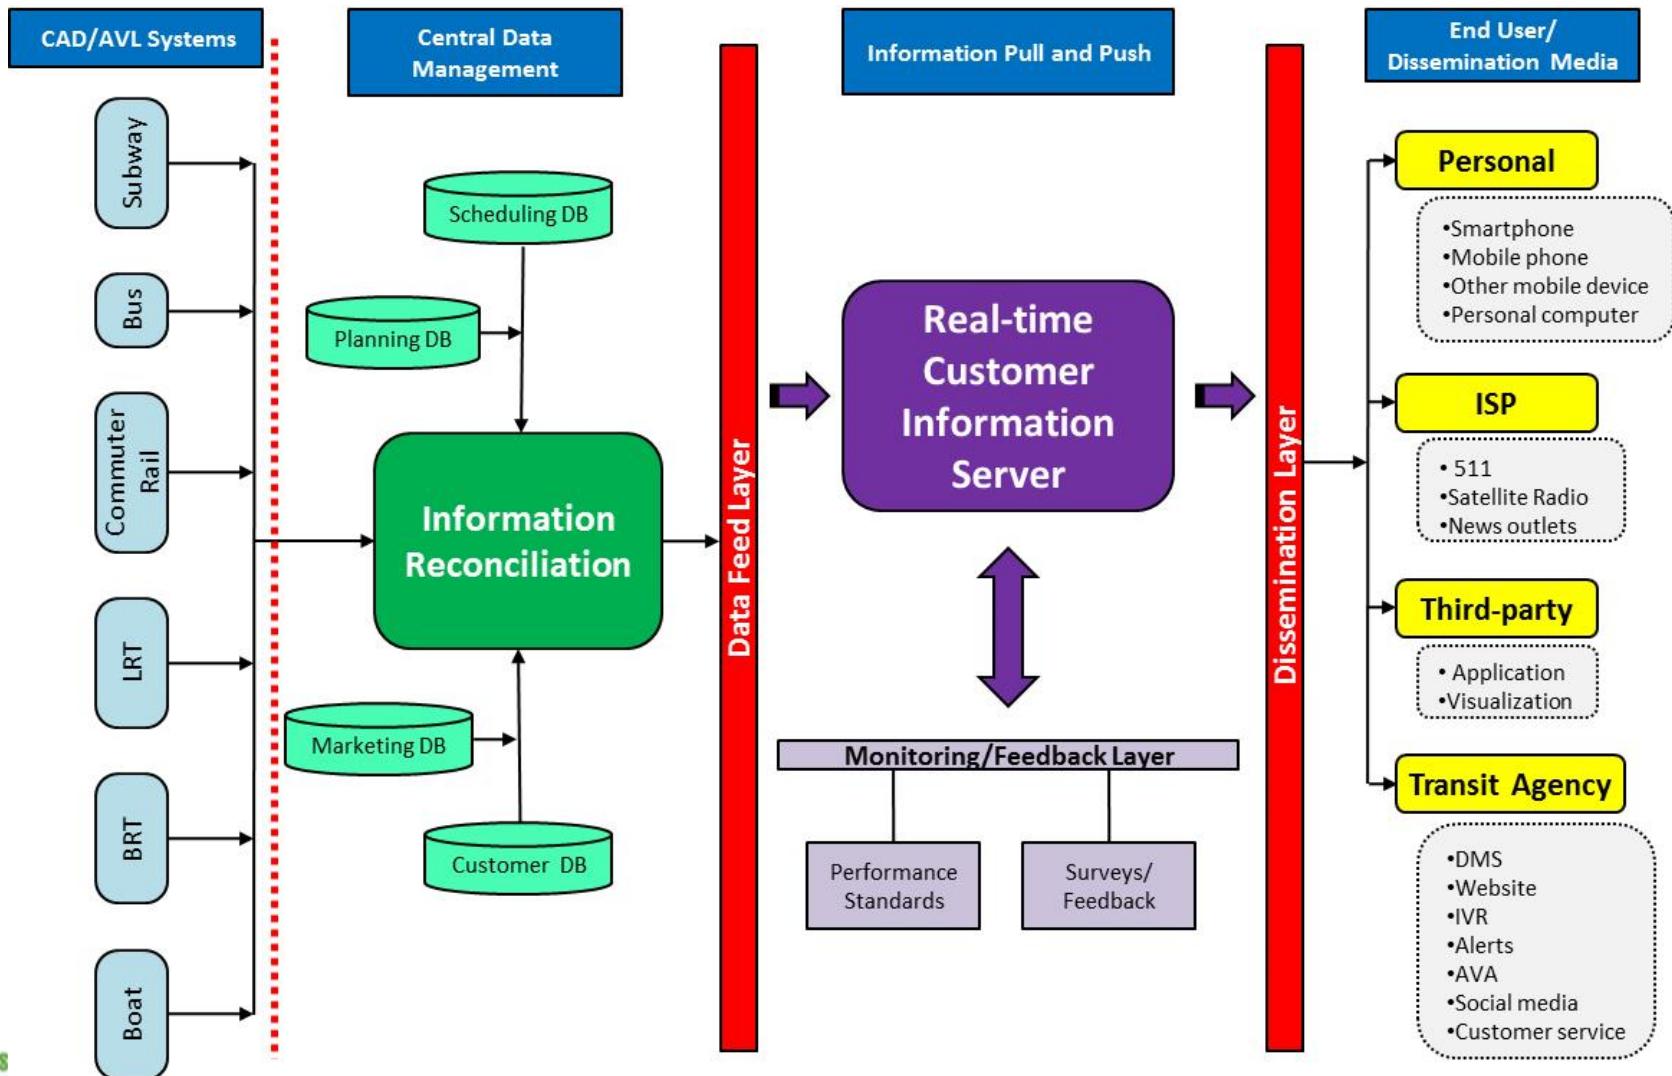

- Linking information resources and management systems to Traveler Information
- Communication network requirements
- Location criteria and environments for Traveler Information hardware (e.g., electronic displays at bus stops)
- Types of dissemination media
- Examples of relating requirements to specific standards

# Linking Information Resources and Management Systems to Traveler Information

- CAD/AVL systems provide raw data
- Information is collected from various databases and processed
- Processed data fed to a customer/traveler information server
- Server is monitored for activity and feedback from customers
- Information is then:
  - Pushed to customers via various dissemination media
  - Pulled by customers looking for specific information
- Need to consider user needs (key part of systems engineering process) when determining most appropriate standards

# Traveler Information Data Exchanges

# Communication Network Requirements

- Example: Communicating with DMS in the field (at stops or stations) could be done:
  - Using wired means, such as phone lines and T-1 lines
  - Using wireless means, such as radio, cellular, or Wi-Fi
- Typical communication network divided into the following:
  - **Backbone:** Capable of carrying all types of data traffic. Interconnects number of nodes
  - **Distribution:** Distribution portion of network provides connection between backbone node and group of ITS devices or buildings
  - **Local:** Local portion of network or “drop” that connects end device or building to distribution cable or directly to node on backbone

# Communication Network Requirements (cont.)

- **Communication technology options:**
  - Cable
  - Fiber
  - Wireless
  - Leased communication services
  - Leased fiber
- **Backbone communication technology options:**
  - Asynchronous transfer mode (ATM)
  - Synchronous optical network (SONET)
  - Ethernet
- **Physical configurations:**
  - Star
  - Ring
  - Mesh
  - Hybrid
- **Distribution communication technology options:**
  - RS-232/485
  - Ethernet
  - Wireless

# A C T I V I T Y

U.S. Department of Transportation  
Office of the Assistant Secretary for  
Research and Technology

**Which one of these is not a basic element of a typical communication network?**

### **Answer Choices**

- a) Backbone
- b) Local
- c) Regional
- d) Distribution

# Review of Answers

- a) Backbone

*Incorrect. The communication backbone is a basic element of a communication network as it is capable of carrying all types of the data traffic in the system.*

- b) Local

*Incorrect. Local is a basic element of a communication network since the local portion of the network or “drop” connects an end device or building to a distribution cable or directly to a node on a backbone.*

- c) Regional

**Correct! Regional is NOT a basic element of a communication network.**

- d) Distribution

*Incorrect. Local is a basic element of a communication network since the distribution portion of the network provides a connection between the backbone node and a group of ITS devices or buildings.*

# Location Criteria/Environments for Traveler Information Hardware

| Location Criteria  | Response Percent |
|--|------------------|
| Boarding counts at stops/stations  | 67.9%            |
| Availability of power  | 57.1%            |
| Number of lines/routes at stop/station   | 53.6%            |
| Availability of communication  | 42.9%            |
| Number of transfers at stop/station  | 39.3%            |
| Signs at all BRT/light rail/subway/commuter rail stations                          | 35.7%            |
| Physical obstructions/visibility   | 32.1%            |
| Mounting infrastructure  | 32.1%            |
| Safety considerations  | 25.0%            |
| Security considerations  | 21.4%            |
| Outdoor versus indoor mounting needs   | 14.3%            |
| Environmental considerations   | 10.7%            |
| Existence of alternate media to provide transit information                        | 7.1%             |
| Other:   |                  |
| • Reasonable coverage per platform for passenger visibility of signs               |                  |
| • Political (ward) considerations  |                  |
| • Locations throughout the community. Beta sites are in offices and retail stores. |                  |
| • Title VI   |                  |
| • At major BRT stations based on boardings   |                  |
| • Standard Rail Station feature  |                  |

# A C T I V I T Y

# Which location criterion for DMS is the most prevalent amongst transit agencies?

## Answer Choices

- a) Safety considerations
- b) Availability of communication
- c) Number of transfers at stops/stations
- d) Boarding counts at stops/stations

## Review of Answers

- a) Safety considerations

*Incorrect. Safety considerations is the ninth most prevalent location criteria amongst transit agencies.*

- b) Availability of communication

*Incorrect. Availability of communication is the fourth most prevalent location criteria amongst transit agencies.*

- c) Number of transfers at stops/stations

*Incorrect. The number of transfers at stops/stations is the fifth most prevalent location criteria amongst transit agencies.*

- d) Boarding counts at stops/stations

***Correct! Boarding counts is the most prevalent location criteria amongst transit agencies.***

## Types of Dissemination Media

- Customer service agent
- Dynamic message sign (DMS)
- Internet accessed by:
  - Personal computer
  - Mobile device
- Data feed for independent developers
- Interactive voice response (IVR)
- Smartphone applications
- Two-way text messaging (SMS)
- Subscription alerts

## Example of Relating Requirements to Specific Standards

- Require real-time information system to export data for use with Google Transit Trip Planner
  - Stated fully in Student Supplement
1. The system shall provide an interface to Google Transit using the General Transit Feed Specification (GTFS).
  2. The Contractor shall perform or help the transit agency with the following processes required to deliver its fixed-route data to Google Transit...
  3. The Contractor shall coordinate with the transit agency to ensure that any abnormal situations in trip planning, including, but not limited to the following, are resolved...

## Summary of Learning Objective #4

### Identify and Describe How Standards Can be Used to Specify Requirements for the Procurement of Traveler Information Systems

- Different standards/formats are used for traveler information systems data exchanges
- Determining communication network architecture must consider certain options
- Specific criteria are used to locate dissemination media
- Variety of dissemination media provide traveler information to the public and app developers

# **Learning Objective #5: Explain the Role of Standards in Traveler Information Systems Procurement**

- Traveler information systems with standards and those without standards
- Impact and importance of using systems engineering process (SEP) in procurement

# Traveler Information Standards

- DATEX II\*
- General Transit Feed Specification (GTFS)
- GTFS-real-time
- Identification of Fixed Objects in Public Transport (IFOPT)\*
- International Traveler Information Systems (ITIS) / Society of Automotive Engineers (SAE) J2540/2
- National Transportation Communications for ITS Protocol (NTCIP)

## Traveler Information Standards (cont.)

- Radio Data System (RDS)\*
- Service Interface for Real Time Information (SIRI)\*
- Transit Communications Interface Profiles (TCIP)
- TransXChange (TxC)\*
- eXtensible Markup Language (XML)

# A C T I V I T Y

U.S. Department of Transportation  
Office of the Assistant Secretary for  
Research and Technology

## Which one of these is an SAE standard?

### Answer Choices

- a) National Transportation Communications for ITS Protocol (NTCIP)
- b) Service Interface for Real Time Information (SIRI)
- c) eXtensible Markup Language (XML)
- d) International Traveler Information Systems (ITIS)

# Review of Answers

- a) National Transportation Communications for ITS Protocol (NTCIP)

*Incorrect. NTCIP is not an SAE standard. NTCIP was an American Association of State Highway and Transportation Officials (AASHTO), ITE, and National Electrical Manufacturers Association (NEMA) joint standard.*

- b) Service Interface for Real Time Information (SIRI)

*Incorrect. SIRI is not an SAE standard. SIRI is a European Committee for Standardization (CEN) product.*

- c) eXtensible Markup Language (XML)

*Incorrect. XML is not an SAE standard. XML was developed by the World Wide Web Consortium and was initiated in 1996.*

- d) International Traveler Information Systems (ITIS)

**Correct! ITIS is an SAE standard.**

# Impact and Importance of Using SE in Procurement

- Standards for traveler information systems consider user needs, which is part of systems engineering process (SEP)
- SEP overarching process applied to transition from stated capability need to affordable, operationally effective, and suitable system
- SEP encompasses application of SE processes in procurement life cycle
- Project development process strongly influenced by selected procurement strategy
- Selecting procurement approach facilitated by NCHRP “The Guide to Contracting ITS Projects” and companion web-based tool

# A C T I V I T Y

**The systems engineering process (SEP) does not include considering user needs.**

### **Answer Choices**

- a) True
- b) False

## Review of Answers

a) True

*Incorrect. The systems engineering process (SEP) does include considering user needs.*

b) False

***Correct! The systems engineering process (SEP) includes considering user needs.***

## **Summary of Learning Objective #5**

### **Explain the Role of Standards in Traveler Information Systems Procurement**

- Traveler information systems with standards and those without standards
- Impact and importance of using SE in procurement

# What We Have Learned

- 1) There are 11 traveler information-related service packages (SPs) in addition to one called transit traveler information.
- 2) The core functions, which define the taxonomy of traveler information systems, are pre-trip, en route/wayside, on-board and mobile.
- 3) A typical communication network is divided into the following three basic elements:
  - a) Backbone
  - b) Distribution
  - c) Local
- 4) The most prevalent criteria for locating DMS is boarding counts at stops/stations.
- 5) Standards for Traveler Information systems consider user needs, which is part of the systems engineering process (SEP).
